WayBackMachine 1 capture 1 Jul 2017

Cyber security is the body of technologies, processes and practices designed to protect networks, computers, programs and data from attack, damage or unauthorized access. In a computing context, security includes both cybersecurity and physical security. Government agencies, the military, corporations, financial institutions, hospitals, and other groups collect, process, and store a great deal of confidential information on computers and transmit that data across networks to other computers. With the growing volume and sophistication of cyber-attacks, ongoing attention is required to protect sensitive business and personal information as well as safeguard national security. One of the most problematic elements of cybersecurity is the quickly and constantly evolving nature of security risks. The traditional approach has been to focus most resources on the most crucial system components and protect against the biggest known threats, which necessitated leaving some less important system components undefended and some less dangerous risks not protected against. Such an approach is insufficient in the current environment. Adam Vincent, CTO-public sector at Layer 7 Technologies (a security services provider to federal agencies including Defense Department organizations), describes the problem: "The threat is advancing quicker than we can keep up with it. The threat changes faster than our idea of the risk. It's no longer possible to write a large white paper about the threat to a system. You would be rewriting the white paper constantly..." To deal with the current environment, advisory organizations are promoting a more proactive and adaptive approach. The National Institute of Standards and Technology (NIST), for example, recently issued updated guidelines in its risk assessment framework that recommended a shift toward continuous monitoring and real-time assessments. According to Forbes, the global cybersecurity market reached \$75 billion for 2015 and is expected to hit \$170 billion in 2020.

## Let the crush change your perception of risk and deal with the reality of cyber security.

- Big Data Analytics
- Digital Forensics Services
- Vulnerability and Risk Assessments
- Policy and Plan Development
- Configuration Management, Design, and Remediation
- Malicious Code Review
- Computer Security Incident Response
- Engineering and Architecture Design
- Application and Software Security Assurance
- Insider Threat and APT Assessment
- Social Engineering (Targeted phishing)

## To Whom It May Concern

**Subject:** Confirmation Letter for the Hack of Oussamaelomari.com Website

Dear Sir / Madam,

This is to confirm that Oussamaelomari. Com was developed and deployed by DUC International Consulting initially and it was running fine. There was an act of unusual sabotage on 15/3/2014 (unprecedented) led to the deletion of the complete website. Our technical consultant was contacted again to the rescue of finding way to re-instate the website and it was done successfully. DUC Charged 55,000AED for the professional services to recover the website which was hosted outside United Arab Emirates. Our Experts utilize computers at DUC office in Dubai and also the laptop (Sony 1080p) of Mr. Oussama to recover the website to normal.

Please feel free to contact me for further information;

Dr. Usman Zafar

Founder & CEO, DUC Consulting International
